VOLCANO BRIDGE SAW BLADES

VOLCANO Granite blade */ Wet cutting / Silver brazed*

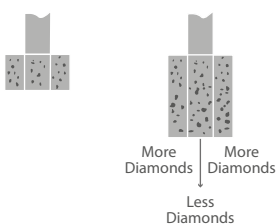

- Excellent silent blades for stone fabricators.
- You can enjoy remarkably fast speed and smooth cutting by **VOLCANO** silent blade.
- Accurate and chip free cutting by precious side clearance of both sides.

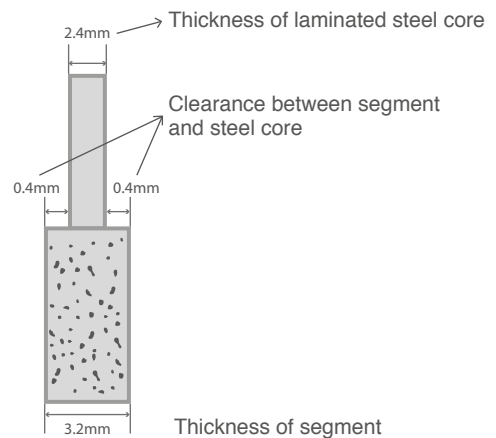

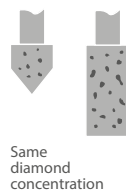

Sandwich segment

Faster cutting - Blades maintain better clearance for their full life
 Longer life - Blades can be worn out completely
 No more 75% worn blades that can't be used due to binding and lack of side clearance

Sandwich Segment Wear

Regular Segment Wear

VOLCANO BRIDGE SAW BLADES

VOLCANO *PRESS*

Silent blades for granite / Silver brazed / Wet

- High technology of patterned diamonds.
- Patterned diamonds makes faster speed and longer life.
- Sandwich segments for even wear
- Excellent noise reduction by laminated silent core
- Smooth and chip free cutting

MARBLE BLADES

VOLCANO Marble blade

Wet / Silver brazed / Silent / Wet

- Highly welcomed by stone fabricators.
- Suitable for bridge saw.
- Fine cut for different marbles and travertine.
- Noise reduction by sandwich laminated core.
- Chip free cutting by narrow slot.

LASER GRANITE BLADES

Granite Blade

Laser welded / Dry or wet cutting

The optimum output of price to performance depends on the harmony of metal bond, diamond design and machine conditions.

Our granite blades are famous for fast cutting, accurate cutting and chip free.

Our new combined split segmented blade for excellent performance of easy cutting, fast cutting and long life, straight cut, even wear profile and reduced edge damage.

- Ideal solution for daily maintenance to keep floors shining.
- 10 times long lasting than ordinary floor pad.
- Clean and polish with ease.
- No need chemicals or wax.
- Save your time by fast shining
- Can be used with conventional rotary or auto scrubber and high speed burnisher
- High speed pad up to 3,000RPM (No.3, No.4, No.5).
- RPM: 150~500 RPM for No.1, No2

DCP No. 0 To remove scratches and heavy stains.

DCP No. 1 For restoration of heavily worn stone and concrete floors. Effectively remove scratches and stains on the floors and clean dirty surface.

DCP No. 2 To remove fine scratches on the floors and leave a clean surface for next step.

DCP No. 3 This step makes the floor to be prepared shining of stone floor.
The concrete floor start to shine.

DCP No. 4 This step makes shining surface of concrete floor. Well prepared for shining of granite and marble.

DCP No. 5 Final step which will bring the surface to mirror look.
You can maintain the high gloss floor regularly without any wax or chemical. Suitable for high speed polishing of polished concrete, granite, marble and terrazzo.

MAXIMUM BLADE CUTTING DEPTHS AND OPERATING SPEEDS

Diamond blade cutting depths listed above are general data. Actual cutting depth will vary with the exact blade diameter or saw type (or brand) or the exact diameter of the blade collars (flanges). Cutting depth will also be reduced if saw components (motor housing, blade guard) extend below the blade collars (flanges).

FLOW AND VOLUME

Water flow and volume are very important to the performance of your blade. Never run your diamond blade dry unless it is designed to be run dry. However, by changing the amount of water, one can alter the blade's cutting characteristics.

CORE BITS

Below are general RPM at which core bits normally operate at their optimum performance level. Remember, faster isn't always better.

When diamond tools exceed their recommended speed, the diamonds tend to glaze over.

The amount of water can also be a factor. More water is not always better.

Core bits can often be redressed using conditioning stick or block.

Wet core bits		Dry core bits	
Diameter	Max RPM	Diameter	Max RPM
3/8"(9.5mm)-2"(50mm)	3,500	3/4"(19mm)-2"(50mm)	12,000

POLISHING PADS

Most wet granite polishing pad are designed to operate on machine with a maximum of 4,000 RPM.

Dry pads should operate at 2,000 to 3,000 RPM. In the case of marble, the optimum polishing will be made between 2,000 and 2,500 RPMs.

When used on grinders, which normally operate between 9,000 and 15,000 RPM, the pad will glaze and the optimum polish will not be occurred.
